Assignment of Security Interest
in United States Patents and Trademarks

FOR GOOD AND VALUABLE CONSIDERATION, receipt and sufficiency of which are hereby acknowledged, AMF Bowling Products, Inc., a Virginia corporation (the "Assignor"), having its chief executive office at 8100 AMF Drive, Mechanicsville, VA 23111, hereby grants to Credit Suisse First Boston, Cayman Islands Branch, as Collateral Agent, (the "Assignee"), with offices at Eleven Madison Avenue, New York, NY 10010, a security interest in all of the Assignor's right, title and interest in, to and under the following (all of the following items or types of property being herein collectively referred to as the "Patent and Trademark Collateral"), whether presently existing or hereafter arising or acquired:

(i) each United States patent and patent application, including each Patent and Patent Application referred to on Schedule A hereto;

(ii) each Patent License, including each Patent License listed on Schedule A hereto;

(iii) each United States trademark, trademark registration and trademark application, and all of the goodwill of the business connected with the use of, and symbolized by, each trademark, trademark registration and trademark application, including each Trademark, Trademark Registration and Trademark Application referred to in Schedule B hereto;

(iv) each Trademark License, whether registered or not, including each Trademark License referred to in Schedule B hereto, and all of the goodwill of the business connected with the use of, and symbolized by, each Trademark; and

(v) all products and proceeds of the foregoing, including any claim by the Assignor against third parties for past, present or future infringement of any Patent, or past, present or future infringement or dilution of any Trademark or Trademark registration, including any Patent or Trademark listed on Schedule A or B hereto, or under any Patent or Trademark licensed under any Patent License or Trademark License, including any such License listed on Schedule A or B hereto, or for injury to the goodwill associated with any Trademark, Trademark registration or Trademark License.

THIS GRANT is granted in conjunction with the security interests granted to the Assignee pursuant to the Security Agreement among the Assignor, the Assignee and certain other parties dated as of February 27, 2004, as amended, modified or supplemented from time to time (the "Security Agreement").

THIS GRANT has been granted in conjunction with the security interest granted to the Assignee under the Security Agreement. The rights and remedies of the Assignee with respect to the security interest granted herein are without prejudice to, and are in addition to those set forth in the Security Agreement, all terms and provisions of which are incorporated herein by reference. In the event that any provisions of this Assignment are deemed to conflict with the Security Agreement, the provisions of the Security Agreement shall govern.

IN WITNESS WHEREOF, the undersigned have executed this Assignment as of the 27th day of February, 2004.

						Patent Expires	26-Jun-2009

Owner: AMBPI

Abstract: In accordance with the present invention, an apparatus is provided wherein cleaner is applied to all or a portion of the lane and the cleaner, oil and other residue is picked up by a vacuum head trailing the cleaner applicator in one trip from the foul line to the pit leaving the lane clean and dry. If desired, the cleaning operation can be limited to the last forty-five feet or so, since it is generally desirable to clean this portion of the lane more often than the front portion. On the return or reverse movement of the stripper, no cleaning operations are undertaken but cleaner may be permitted to flow from the cleaner storage tank to the applicator so that the applicator will have sufficient cleaner in it for the beginning of application on the next lane. Means is provided for bowing the vacuum head so that the center is lower than the side edges so that it conforms generally to the concave shape of a bowling alley. A waste tank is provided with appropriate baffles to separate the waste liquid and solids from an air stream created by a vacuum motor attached to the outlet of the waste tank.

Abstract: In accordance with the present invention, a combination apparatus is provided wherein cleaner is applied to all or a portion of the lane and the cleaner, dressing and other residue is picked up by a vacuum head trailing the cleaner applicator followed by a buffer roller to apply new dressing to the lane. If desired, the cleaning operation can be limited to the last forty-five feet or so, since it is generally desirable to clean this portion of the lane more often than the front portion. On the return or reverse movement of the stripper, no cleaning operations are undertaken but cleaner may be permitted to flow from the cleaner storage tank to the applicator so that the applicator will have sufficient cleaner in it for the beginning of application on the next lane. In an alternative embodiment, the applicator may be in the form of a spray nozzle to spray cleaner onto the lane. A distance wheel is provided which supplies digital signals to a control apparatus which sequences each operation at the appropriate position of the carriage along the bowling alley.

						Patent Expires 1 Month	**21-Oct-2008**
						Patent Expires	**21-Nov-2008**

Abstract: An improved bowling lane stripping apparatus is disclosed of the type wherein the squeegee-equipped pickup head whose function it is to wipe the alley free of dirt-laden solvent is pivotally connected to the carriage carrying the power unit such that this head is free to raise up without gouging the lane surface as the carriage support wheels roll down the ramps leading into the gutters alongside the lane thereby causing the unit to tip forwardly. As a further improvement, the pickup head is so weighted and displaced forwardly of its pivotal connection to the carriage a distance chosen to cooperate with the weighted head and define a cantilevered mounting capable of maintaining the squeegee carried thereby in continuous wiping contact with the lane surface that thus becomes effective to remove even puddles and pools of liquid left in depressed areas of the latter.
