TRADEMARK ASSIGNMENT

Electronic Version v1.1
Stylesheet Version v1.1

SUBMISSION TYPE:	NEW ASSIGNMENT
NATURE OF CONVEYANCE:	SECURITY INTEREST

CONVEYING PARTY DATA

Name	Formerly	Execution Date	Entity Type
NORTH AMERICAN SCIENTIFIC, INC.		09/21/2007	CORPORATION: DELAWARE
NORTH AMERICAN SCIENTIFIC, INC.		09/21/2007	CORPORATION: CALIFORNIA

RECEIVING PARTY DATA

Name:	AGILITY CAPITAL, LLC
Street Address:	226 E. Canon Perdido Street
Internal Address:	Suite F
City:	Santa Barbara
State/Country:	CALIFORNIA
Postal Code:	93101
Entity Type:	LIMITED LIABILITY COMPANY: CALIFORNIA

PROPERTY NUMBERS Total: 3

Property Type	Number	Word Mark
Serial Number:	77011130	CLEARPATH
Serial Number:	77011134	CLEARPATH
Registration Number:	2608890	PROSPERA

CH $90.00 77011130

CORRESPONDENCE DATA

Fax Number: (858)550-6420
Correspondence will be sent via US Mail when the fax attempt is unsuccessful.
Phone: 858-550-6403
Email: erin.obrien@cooley.com
Correspondent Name: Erin O'Brien
Address Line 1: c/o Cooley Godward Kronish LLP
Address Line 2: 4401 Eastgate Mall
Address Line 4: San Diego, CALIFORNIA 92121

ATTORNEY DOCKET NUMBER:	305948-130 NASI
NAME OF SUBMITTER:	Erin O'Brien
Signature:	/Erin O'Brien/
Date:	09/24/2007

INTELLECTUAL PROPERTY SECURITY AGREEMENT

This **INTELLECTUAL PROPERTY SECURITY AGREEMENT** is entered into as of September 21, 2007 by and among Agility Capital, LLC ("**Lender**") and North American Scientific, Inc., a Delaware corporation and North American Scientific, Inc., a California corporation (each a "**Grantor**" and collectively, "**Grantors**").

RECITALS

Lender has agreed to make certain advances of money and to extend certain financial accommodation to Grantors (the "**Loans**") in the amounts and manner set forth in that certain Loan and Security Agreement by and among Lender and Grantors (as amended from time to time, the "**Loan Agreement**") dated of even date herewith. Lender is willing to make the Loans to Grantors, but only upon the condition, among others, that Grantor shall grant to Lender a security interest in all of Grantor's right title, and interest in, to and under all of the Collateral whether presently existing or hereafter acquired. Capitalized terms used herein have the meaning assigned in the Loan Agreement.

NOW, THEREFORE, Grantor agrees as follows:

AGREEMENT

To secure performance of Grantor's obligations under the Loan Agreement, Grantor grants to Lender a security interest in all of Grantor's right, title and interest in Grantor's intellectual property (including without limitation those Copyrights, Patents and Trademarks listed on Exhibits A, B and C hereto), including without limitation all proceeds thereof (such as, by way of example but not by way of limitation, license royalties and proceeds of infringement suits). This security interest is granted in conjunction with the security interest granted to Lender under the Loan Agreement. Each right, power and remedy of Lender provided for herein shall not preclude the simultaneous or later exercise by Lender of any or all other rights, powers or remedies.

[REMAINDER OF PAGE INTENTIONALLY LEFT BLANK.]

IN WITNESS WHEREOF, the parties have caused this Intellectual Property Security Agreement to be duly executed as of the first date written above.

Address of Grantor:

20200 Sunburst Street
Chatsworth, CA 91311
Attn: James Klingler

NORTH AMERICAN SCIENTIFIC, INC.
(a Delaware corporation)

By: James W Klingler

Title: Sr. V.P. + CFO

Address of Grantor:

20200 Sunburst Street

Copyrights

Title	Registration Number	Registration Date

EXHIBIT B

PATENTS

Name with Patent Number	Subject	Date of Issuance and Expiration Date
Needle for Imaging and Sampling (5,647,374)	An instrument and method for the biopsy of tumors, such as breast lesions, are disclosed. A stylus comprises a tube having radioactive material in the tip capable of being imaged, the stylus contained within a needle. An image of the tip of the needle can be traced as it penetrates a human body, is guided toward an imaged tissue mass, and is placed within the tumor.	July 15, 1997 until December 30, 2014
Stepper apparatus for use in the imaging/treatment of internal organs using an ultrasound probe (5,871,448)	The stepper apparatus for use in imaging/treatment of prostate cancer with radioactive seeds includes a body portion, a support element for holding the ultrasound probe, a slide portion for moving the support element relative to the body portion, and a support element for holding a template which has a plurality of openings therethrough, through which radiation seed insertion needles may be positioned.	February 16, 1999 until October 14, 2017
Laser Welded Brachytherapy Source and Method of Making the Same (5,997,463)	A brachytherapy source for use in radiation treatment of the body includes radioactive material, and a housing. The housing is used to contain the radioactive materials, and is formed by at least one tube having two ends. The two ends of the tube are sealed by welding such that a radiation distribution of the brachytherapy source approximates a point source that is free of cold zones to minimize underexposure or overexposure of the body to radiation and to simplify the placement of the brachytherapy source in the body.	December 7, 1999 until March 26, 2018
Stabilizer assembly for stepper apparatus and ultrasound probe (6,179,262)	The stabilizer assembly is used to position a stepper assembly for an ultrasound probe. The stabilizer includes two spaced apart swivel assemblies, each swivel assembly including clamps at one end thereof locking the stabilizer to a table.	January 30, 2001 until October 23, 2018

Radioactive Seeds and Method for Using Same (6,440,058)	A system and method of treating an affected region of diseased tissue in a patient is described. A plurality of first radioactive seeds and a plurality of second radioactive seeds are implanted in the affected region.	August 27, 2002 until August 25, 2019
Radioactive Seed with Multiple Markers and Method for Using Same (6,503,186)	A radioactive seed which discloses the orientation and the location of the seed when the seed is exposed to X-ray photography is provided. The seed contains multiple X-ray detectable markers which will disclose the orientation and the location of the seed when the seed is exposed to X-ray photography. The seed can also have a single marker which wraps around the external surface of the seed or wraps around a carrier body within the seed. The single marker will also disclose the orientation as well as the location of the seed.	January 7, 2003 until March 29, 2020
Apparatus for loading radioactive seeds and spacing elements into a brachytherapy needle (6,582,354)	The loading apparatus includes a tray assembly which receives radioactive seeds and spacer elements from containers thereof.	June 24, 2003 until July 23, 2020
Radioactive Seed with Multiple Markers and Method for Using Same (6,638,207)	A radioactive seed which discloses the orientation and the location of the seed when the seed is exposed to X-ray photography is provided. The seed contains multiple X-ray detectable markers which will disclose the orientation and the location of the seed when the seed is exposed to X-ray photography. The seed can also have a single marker which wraps around the external surface of the seed or wraps around a carrier body within the seed. The single marker will also disclose the orientation as well as the location of the seed.	October 28, 2003 until October 15, 2020
Thin Radiation Source and Method of Making the Same	The present invention relates to radiation sources and a method for producing radiation sources. Embodiments of the present invention are directed	September 7, 2004 until June 12, 2021

(6,787,786)	to radiation sources that can be used to calibrate nuclear imaging equipment, such as flood sources. According to embodiments of the invention, the radiation source includes a outer housing that contains a substrate upon which a radioactive pattern is deposited. The radioactive deposit may be placed on the surface of the substrate in the form of a deposited solution and may be fixed to the surface of the substrate by, for example, a binding agent and/or a sealing layer. The deposited solution may also include a colorant to visually indicate the activity distribution of the radioactive deposit.	
Radioactive seed with multiple markers and method for using same (6,881,183)	A radioactive seed which discloses the orientation and the location of the seed when the seed is exposed to X-ray photography is provided. The seed contains multiple X-ray detectable markers which will disclose the orientation and the location of the seed when the seed is exposed to X-ray photography. The single marker will also disclose the orientation as well as the location of the seed.	October 23, 2003 until October 23, 2023
