<b>Name:</b> Return to Stable charge state circuit	<b>Description:</b> If Li-S batteries are stored in a charged state, the cells will swell within a short period of time. This circuit monitors the charge state of the cells, and will slowly start to discharge the cells if no charge or discharge activity is sensed within a specific amount of time, which can be a function of ambient conditions. Once discharged to a lower charge state, the electronics pack can go to sleep if not used.
