Sophos Broadens Security Portfolio with Completion of Astaro Acquisition

Rapid increase in complex security threats and adoption of web-based applications requires new generation of robust network security protection

Global IT security and data protection company Sophos today announced that it has completed its acquisition of network security vendor Astaro. This acquisition will allow Sophos to deliver coordinated, best-in-class threat and data protection offerings from every endpoint to any network boundary.

Organizations today face new challenges in protecting users and IT infrastructure from complex and targeted security threats; especially those that gain entry from across the Web or through new applications. As workforces become distributed across multiple offices, including the home, even basic security controls have become hard to update and enforce. Through this acquisition, Sophos will address the need for security solutions that provide threat and policy protection no matter where the user or company data resides.

"Never before has the security and IT environment been so challenging to secure for our customers," said Steve Mumford, Chief Executive Officer, Sophos. "Together Sophos and Astaro have the ingredients to uniquely solve today and tomorrow's increasingly complex security challenges while allowing IT to enable users to work more flexibly and embrace new devices and applications."

The acquisition, which was announced on May 6, 2011, will deliver an industry-first combination of endpoint protection with UTM. Once integration is complete, the Sophos portfolio of security products will:

- Combine Astaro's network security with Sophos' threat expertise. The initial integration with the Astaro Security Gateway and Sophos Anti-Virus will bring real-time protection against malware using Sophos Live Protection infrastructure, a comprehensive architecture for real-time updates to users in offices anywhere around the globe, and Sophos Web protection, real-time blocking of malicious websites via SophosLabs extensive Web reputation systems, which classify over 50,000 infected Web pages every day.
- Longer term, the integration will allow central management of anti-malware, Web and data control policies across endpoint, mobile and network enforcement points – including consumer-owned mobile devices and branch, home or remote offices. This will offer IT better visibility and control, whether the enforcement points are enterprise, consumer owned or located at a central, branch or home or remote office.
- Upon completing Astaro partner certification, Sophos partners will have access to the full network security portfolio including unique capabilities for protecting branch offices, log management and a leading network security gateway available in any delivery model. Likewise, Astaro partners will have the opportunity to become Sophos partners and deliver a complete set of endpoint, mobile and gateway solutions to their customers. "Both companies are pragmatic and appreciate the need to be simple and secure for target buyers," wrote The 451 Group in a May 6th 2011 Deal Analysis [1], regarding the acquisition. "The disruptions in this market require bold moves. Sophos has made one."

"We founded Astaro with the mission of bringing network security products to organizations of all sizes and accomplished this goal by creating easy-to-use, Unified Threat Management solutions that addressed several facets of network security. However, as the threat landscape continued to evolve it became clear that gateway security alone would no longer be sufficient to effectively secure a network," said Jan Hichert, Astaro co-founder and CEO, and now Sophos' Senior Vice President and General Manager, Network Security.

[1] "Sophos moves beyond the endpoint in acquiring Astaro" published May 6, 2011.

About Sophos

More than 100 million users in 150 countries rely on Sophos as the best protection against complex threats and data loss. Sophos is committed to providing complete security solutions that are simple to deploy, manage, and use and that deliver the industry's lowest total cost of ownership. Sophos offers award-winning encryption, endpoint security, web, email, mobile and network security solutions backed by SophosLabs – a global network of threat intelligence centers.
