**TERMINATION OF SECURITY INTERESTS
PLEDGE AND SECURITY AGREEMENT**

October 23, 2013

WHEREAS, the undersigned is a party to that certain Pledge and Security Agreement dated August 3, 2009, recorded by the Assignment Division of the U.S. Patent and Trademark Office at Reel 023069, Frame 0082 on August 7, 2009 and at Reel 4041, Frame 0804 on August 11, 2009 (as amended and restated by that certain Amended and Restated Security Agreement dated as of November 24, 2010 and as further amended, supplemented and otherwise modified, the "Security Agreement"), by and among Heartland Payment Systems, Inc., a Delaware corporation (the "Borrower"), and JPMorgan Chase Bank, N.A., a national banking association, in its capacity as the administrative agent (in such capacity, the "Administrative Agent") under that certain Amended and Restated Credit Agreement dated as of May 30, 2008 by and among the Borrower, the lenders and agents party thereto and the Administrative Agent (as amended and restated by that certain Second Amended and Restated Credit Agreement dated as of November 24, 2010 and as further amended, supplemented and otherwise modified, the "Credit Agreement");

WHEREAS, pursuant to the Security Agreement, the Borrower granted a security interest in its right, title and interest in the property listed on Exhibit A hereto (the "Pledged Collateral") to the Administrative Agent, for the ratable benefit of the Secured Parties referred to therein, as collateral security for the prompt and complete payment and performance of the Secured Obligations (as defined therein);

WHEREAS, as of the date hereof, the Secured Obligations have been paid and discharged in full and the Security Agreement has been automatically terminated by its terms.

NOW, THEREFORE, for good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, and with the intent to be legally bound hereby, the undersigned hereby agrees that the security interests of the Administrative Agent in the Pledged Collateral in connection with the Security Agreement and the Credit Agreement are hereby released, and the parties hereto shall have no further rights, remedies, liabilities or obligations under the Security Agreement.

[Remainder of page intentionally left blank.]

IN WITNESS WHEREOF, the parties hereto have executed this Termination of Security Interests to be effective as of the date first written above.

JPMorgan Chase Bank, N.A., as
Administrative Agent

By:

Patents and Patent Applications

Unless otherwise noted below, Heartland Payment Systems is the owner of the following patents and patent applications.

SYSTEMS AND METHODS FOR IMPLEMENTING PARKING TRANSACTIONS AND OTHER FINANCIAL TRANSACTIONS

Abstract: A payment processing system configured to provide merchant-specific accounts to consumers, such as virtual prepaid parking accounts, that are accessed by payment instruments. In one embodiment, the payment processing system can create and provide a variety of payment methodologies for purchases, such as pay-as-you-go, virtual prepaid, virtual subscription, and post-paid purchases. In some embodiments, the merchant can provide consumers with rewards accounts and opportunities to earn reward points or other loyalty-based currencies through qualifying purchase transactions. The system can also refund merchant-specific accounts for returns or unused portions of prepaid resources. The consumer can access their merchant-specific accounts for purchase payment or refund using a preferred payment instrument, such as a credit or debit card.

METHOD AND SYSTEM FOR MICROPAYMENT TRANSACTIONS

Abstract: A micropayment system and method is presented for a payor U to establish payment to payee M for a transaction T, which typically has a very low value $T \ll V$?. The micropayment scheme minimizes the bank's processing costs, while at the same time eliminating the need for users and merchants to interact in order to determine whether a given micropayment should be selected for payment. In one embodiment, the micropayment scheme includes time constraints, which require that an electronic check C for the transaction T be presented to a bank B for payment within a predetermined time/date interval. In another embodiment, the micropayment scheme includes a selective deposit protocol, which guarantees that a user is never charged in excess of what he actually spends, even within a probabilistic framework. In another embodiment, the micropayment scheme includes a deferred selection protocol, which provides the bank with control and flexibility over the payment selection process.

Heartland Payment Systems has the exclusive license to these patents from Massachusetts Institute of Technology.

MICROPAYMENT PROCESSING METHOD AND SYSTEM

Abstract: A method of producing an offer package (150) includes defining, within the offer package (156), a description of an offered product. The cost of the offered product and the merchant (154) making the offer are also defined within the offer package (158), which includes an encrypted version of the offered product (158, 160, 164).

MICROPAYMENT PROCESSING METHOD AND SYSTEM

Abstract: A payment processing system includes one transaction processor that aggregates cost data associated with low-priced sales transactions between a consumer and a merchant. The transaction processor sends data that represents the aggregated cost data to an acquiring banking entity associated with the merchant. The system also includes another transaction processor that stores data that represents each individual low-priced sales transaction. The stored data is accessible by one or more banking entities associated with the merchant.

SYSTEM FOR PROCESSING STORED VALUE INSTRUMENT

Abstract: Disclosed is a method for managing at least one transaction through traditional credit card authorization payment infrastructures by supplying personal account numbers to retailers. Personal account numbers correspond to issuer managed accounts that may be assigned at point of sale, and activated at redemption, and may restrict which merchants can process the personal account number to extract value therefrom. Also disclosed is an apparatus for distribution in retail and redemption at selected redemption sites. The apparatus is a card that includes machine readable code and account information where at least some of data corresponding to the machine readable code differs from the account information. The card may configured to retain a personal account number or other account information compatible with selected redemption site interfaces. Redemption can be limited to selected retailers or groups of retailers.

APPARATUS AND METHOD FOR DOWNLOADING CONFIGURATION DATA TO CARD TERMINALS AND FOR VIEWING ACTIVITY AT CARD TERMINALS

Abstract: Downloading configuration data to program card terminals and providing real-time data of activity occurring at card terminals. A merchant can log on to a system server and enter information to program options for its card terminals such as via a web page on an Internet site. The system server formats the information into a file based upon a communication protocol and programming rules for the card terminal, and downloads the file to it as a data stream. The card terminal programs itself according to the configuration data. A merchant can also view data for activity occurring at its card terminals, possibly in real-time proximate to detection of the activity by the system server. In conjunction with processing transactions or other activity from the card terminals, the system server replicates the records for the activity and makes them available to merchants such as via a web page on an Internet site. Both the entry of configuration data and viewing of real-time activity can occur at a network connection remote from the card terminals, allowing the merchants to program the card terminals and view their activity at any location having network access..

SYSTEM AND METHOD OF AGGREGATING MULTIPLE TRANSACTIONS OVER NETWORK-BASED ELECTRONIC PAYMENT TRANSACTION PROCESSING SYSTEM

Abstract: A system and method of aggregating multiple transactions over a network-based

electronic payment transaction processing system is provided. The system includes a transport-aggregating clear-text Internet transaction (TACIT) server designed to allow conventional electronic payment transaction processing systems to work over networks which rely on the Internet Protocol, and to still support the fault-tolerance and load balancing. In one embodiment, the system aggregates multiple transmission control protocol sockets into a single socket to a back-end payment processing system in a single application. The transport-aggregating, cleartext Internet transaction (TACIT) server resides on an intermediate system that is positioned between the Internet endpoints and a payment transaction processing system (TPS).
